Abstract

This inventory represents the current status and usage of all non-revocable¹, revocable², environmental control³ and shallow aquifer⁴ groundwater rights located within the Las Vegas Valley, Clark County, Nevada for the 1995 calendar year. Also included for summary purposes are various tables and graphs showing the imported use from the Colorado River and effluent re-use.

The numbers that follow are valid at the time of this report and may vary from previously published figures since water rights within the Las Vegas Valley are being approved, cancelled, certified or withdrawn on a daily basis.

Currently the total groundwater rights permitted within the Las Vegas Valley equals 88,878 acre-feet. Of this, 70,852 acre-feet are non-revocable; 14,333 acre-feet are revocable; 3,366 acre-feet are environmental control and 327 acre-feet are rights for the shallow aquifer.

For the 1995 calendar year, 72,538 acre-feet of groundwater was pumped from the Las Vegas Valley. Of this amount, 55,802 acre-feet represents non-revocable rights: This is 78 percent of the available non-revocable rights and 77 percent of the total pumped for 1995. 5,424 acre-feet represents revocable rights. This is 38 percent of the available revocable rights and 7.5 percent of the total pumped for 1995. 1,239 acre-feet represents environmental control rights. This is 37 percent of the available environmental control rights and 1.7 percent of the total pumped for 1995. 54 acre-feet represents shallow aquifer rights: This is 16.5 percent of the available shallow aquifer rights and .1 percent of the total pumped for 1995.

¹ Non-revocable rights are those rights which have a priority date of March 24, 1955 or earlier.

² Revocable rights are those rights which have a priority date after March 24, 1955 and are subject to revocation when water can be furnished by a municipality engaged in furnishing water.

³ Permits issued for environmental control are not subject to revocation, but are site specific and limited to the length of the project.

⁴ Shallow aquifer rights are those rights issued to beneficially use water pumped to alleviate potential hazards to persons and property resulting from the rise of groundwater due to secondary recharge.

Also during 1995, 3,006 acre-feet of water was pumped from recharge storage, which represents 4 percent of the total groundwater pumped. The remaining 9.7 percent (7,013 acre-feet) of groundwater pumped for 1995 is accounted for as estimated usage from domestic wells.

Of the 88,879 acre-feet of groundwater rights permitted within the Las Vegas Valley, 65,678 acre-feet are metered; even though this is only 74 percent of the total permitted rights, 86 percent of the total permitted water rights pumped during 1995 are metered.

1995 was the ninth year for the artificial recharge program in which 19,172 acre-feet of potable Colorado River water was injected into the Las Vegas Valley groundwater basin.

General Statement

The Las Vegas Valley groundwater pumpage data is collected by several methods, a brief explanation follows.

The Southern Nevada Branch office of the Division of Water Resources read approximately 67 well meters during 1995 which included all of the hotels, golf courses and large private industries that obtain some, if not all, of their water from their own wells. This data is listed in Table No. 1 under metered permit wells which includes historical data for individual meters that were not read during 1995.

The Southern Nevada Branch Office of the Division of Water Resources also conducts approximately 240 individual field investigations each year in the Las Vegas area; this data, together with data from previous years, is listed in Table No. 1 under unmetered permit wells. The remaining data is supplied monthly by the individual water purveyors and is listed in Table No. 1.

A running total is kept of all wells drilled which have been designated for domestic use and a usage value of one acre-foot per year is given to each of these wells as listed in Table No. 1.

Debits from the Artificial Storage account are made when the individual public utilities groundwater pumpage exceeds their permitted groundwater rights.

Artificial recharge is Colorado River water that was injected into the Las Vegas Valley groundwater aquifer.

The summation of this data as indicated in Table No. 1 is the annual amount of groundwater pumped from the Las Vegas Valley.
